Response to Amendment

The following is in response to the amendment filed on December 21, 2005.

Allowable Subject Matter

Claims 1-11 and 15-16 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest a method of oxidizing carbohydrates having primary alcohol groups with the combination of a nitroxyl radical mediator, halide, peroxidase enzyme, and a hydroperoxide. "Halide" does not include hypohalites.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed December 21, 2005 have been fully considered and are persuasive.

The rejections set forth previously under 35 U.S.C. 102(b) over Viikari et al (WO 99/23117), under 35 U.S.C. 102(e) over Jaschinski et al (US 6,824,645), and under 35 U.S.C. 103(a) over Amann et al (US 6,242,245) in view of Allen (US 6,503,507) or Johansen (US 6,251,386) have all been withdrawn.

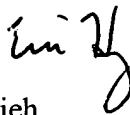

It is recognized that none of the applied prior art references teach the combination of peroxidase enzyme and halide in solution with the nitroxyl radical mediator. The prior art including those references above teaches using a peroxidase enzyme and/or hypohalite with the nitroxyl radical mediator. It is also recognized that in the present invention the peroxidase enzyme (with the necessary hydroperoxide) oxidizes the halide rather than the nitroxyl radical mediator.
